Real options valuation, also often termed real options analysis, (ROV or ROA) applies option valuation techniques to capital budgeting decisions. A real option itself, is the right "but not the obligation" to undertake certain business initiatives, such as deferring, abandoning, expanding, staging, or contracting a capital investment project.

### **Real options valuation - Wikipedia**

In finance, valuation is the process of determining the present value (PV) of an asset. Valuations can be done on assets (for example, investments in marketable securities such as stocks, options, business enterprises, or intangible assets such as patents and trademarks) or on liabilities (e.g., bonds issued by a company).

### **Valuation (finance) - Wikipedia**

A company can be separated into its operating businesses or assets and its non-operating assets. Operating assets are typically the principal sources of a company's revenues, cash flow, and income.

Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.
