better quality, less power, and smaller, cheaper devices, thereby enabling public and private radio communications, television, and wireless networking. Early radio systems transmitted analog signals.

WIRELESS COMMUNICATIONS - Wireless Systems Lab

1.1 History of Wireless Communications The first wireless networks were developed in the Pre-industrial age. These systems transmitted information over line-of-sight distances (later extended by telescopes) using smoke signals, torch signaling, flashing mirrors, signal fires, or semaphore flags. An elaborate set of signal combinations was developed to convey complex messages with these ...

2 The wireless channel A good understanding of the wireless channel, its key physical parameters and the modeling issues, lays the foundation for the rest of the book. This is the goal of this chapter. A defining characteristic of the mobile wireless channel is the variations of the channel strength over time and over frequency. The variations can be roughly divided into two types (Figure 2.1 ...
